August 16, 2017

To Whom It May Concern;

Cedric Johnson, b.d. [REDACTED], was examined on August 8, 2017.

The report of the examination is as follows:

Unaided Visual Acuity:	Distance	Pinhole	Near
	O.D. 20/400	O.D. 20/70	O.D. 20/60
	O.S. 20/400	O.S. 20/70	O.S. 20/60-
Computerized Objective Refraction	Subjective Refraction	Best Corrected Visual Acuity	
O.D. -1.75 -1.00 x 072	O.D. -0.75 -1.00 x 084	O.D. 20/40	
O.S. -0.75 -1.25 x 082	O.S. -0.50 -1.25 x 093	O.S. 20/ 50	
	Add +1.50		

Color Vision : Ishihara color plates O.D. 1/8 O.S. 2/8 Dx: Red-Green color perception deficiency  
Depth Perception: 1/9 Wirt Dot, Stereovision \_\_\_\_\_ Dx: minimal depth perception

Ocular motility: full range of motion; choppy movement; left eye tropia (turned out) upon confrontation

Goldman Tonometry: O.D. 21 mm Hg O.S. 22 mm Hg 5:56 p.m.

Biomicroscopy: lids, lashes, conjunctiva, cornea, sclera, iris - no apparent pathology.  
Early cataracts, both eyes.

Internal Ocular Health Evaluation: right optic nerve pallor

Visual Field (30-2 Humphrey): Right eye results: limited inferior central visual field less than 5 degrees.  
Left eye results: left superior temporal quadrant with limited areas of lower threshold. left Nasal Quadrant defect; inferior visual field loss with limited areas of lower threshold.\*

Ocular Coherence Tomography: very limited optic nerve thinning; underlying nasal retina defect in right eye.

Summary: Cedric Johnson has an optic nerve defect. This defect may or may not have other cranial involvement. Intraocular pressure is slightly elevated but would not cause the visual field defects present. A neurologist appointment was made.

Conclusion: I suggest an M.R.I. to determine extent of cranial involvement.

\*testing requires attentiveness, understanding, and performance. Patient subjective responses determine level of threshold detected.

Respectfully Yours,

*David J Casper, O.D.*  
David J. Casper, O.D.
